IP Camera CGI profile

The cgi listed in this article is a set of http protocol-based interfaces from ip camera, and client programs (either web pages running on a web browser or other applications) can operate on the device through cgi.

- Security authentication for cgi: The cgi listed below require security authentication when access. And different cgi interfaces require different permissions, including three levels: visitors, operators, and managers. Permissions are determined by the user set on the device. The specific security authentication mechanism supports two ways: the Basic security authentication mechanism specified in the http protocol, and the attaching of the user name and password directly to the cgi parameters.
- How to access the cgi: In all http methods, the cgi listed in this article only support **get** and **post**, where **upgrade.cgi** and the **restore.cgi** only supports the post method.

Get example:

```
<form name="form2" method="get" action="cgi-bin/hi3510/cleanlog.cgi">  
    <input name="cururl" type="hidden" >  
    <input name="name" type="hidden" value="access">  
</form>
```

Post example:

```
<form name="form5" method="post" target="retframe" enctype="multipart/form-data"  
      action="cgi-bin/hi3510/upgrade.cgi" onSubmit="return upgrade()">  
    <td colspan="3"><input type="file" name="setting_file" >  
    <input type="submit" value=" submit " >  
</form>
```

- Return of cgi: Depending on the return information returned, the cgi listed in this article are

divided into two categories:

- ✓ The cgi for getting the device status and parameters.
 - If successful, return text including the device status or parameter in a format similar to the variable definition in javascript, defining each state or parameter as a variable and returns, such as:

```
var bps_1="2048";
var fps_1="25";
var gop_1="50";
var brmode_1="1";
var imagegrade_1="1";
var width_1="704";
var height_1="576";
```
 - If the fetching fails, an error message will be returned, such as: "[Error] Get video attribution error! Errcode is 0xa10e6008".
- ✓ The cgi for setting device parameters. This kind of cgi will return text information containing the results of the operation, "HTTP / 1.0 200 OK" will return if successfully, and specific error information will return if fail, such as "[Error] [Data-Length: 91] unrecognized or incomplete command line." Means that the parameters included with cgi are wrong.
- ✓ The cgi commands can be tested by input directly in the browser as follows:

<http://192.168.1.6/cgi-bin/hi3510/param.cgi?cmd=getwirelessattr>

You can also directly attach the user name and the password of camera:

function	System upgrade (dangerous, use with caution)	
authority	admin	
grammar	/cgi-bin/hi3510/upgrade.cgi[?-filename=]	
parameter	filename	The name of upgrading file
return	not have	
remarks	This cgi must use the post method to send the upgrade file to the ip camera.	
give an example	<pre><form name="form5" method="post" target="retframe" enctype="multipart/form-data" action="cgi-bin/hi3510/upgrade.cgi"> <input type="file" name="setting_file" > <input type="submit" value="upgrade" > </form></pre>	

Chapter 17: Log

param.cgi?cmd=logsync

function	Get log information
authority	admin
grammar	/cgi-bin/hi3510/param.cgi[?cmd=logsync]

parameter	not have
return	not have
remarks	This CGI will refresh log information. After the execution, by accessing the /log/syslog.txt to get the log content. Note: After the equipment restart, the log will be automatically cleared.
instance	/cgi-bin/hi3510/param.cgi?cmd=logsync /log/syslog.txt

param.cgi?cmd=cleanlog

function	Clear log information	
authority	admin	
grammar	/cgi-bin/hi3510/param.cgi[?cmd=cleanlog&-name=]	
parameter	name	Clear the log command name: access: Log name
return	Success: contains Success Error: contains Error	
remarks	You can use this CGI to clear the log information when there are too many logs.	
give an example	/cgi-bin/hi3510/param.cgi?cmd=cleanlog&-name=sys	

Chapter 18: Appendix

Appendix I: Equipment Type Definitions

1. Device type

To identify device types, different functions with vary devices.
ASCII code, with 32 bytes in length.

2. Field type

Two bytes per field.

The first byte represents the total field type, and the second field represents the sub type.

Field 3	Field 4
Camera Lens	PTZ Type
'S'	'Z'

3. **Lens field 'S' as follows:**

Chapter 19: Intelligent human form

param.cgi?cmd=getsmdattr

function	Get intelligent humanoid recognition	
authority	admin	
grammar	not have	
return	smd_enable	0-Off, 1-On
give an example	/cgi-bin/hi3510/param.cgi?cmd=getsmdattr	

param.cgi?cmd=setsmattr

function	Set up the intelligent humanoid identification	
authority	admin	
grammar	not have	
return	smd_enable	0-Off, 1-On
give an example	/cgi-bin/hi3510/param.cgi?cmd=setsmattr&-smd_enable=1	

param.cgi?cmd=getsmdex

function	Get the box to human shape	
authority	admin	
grammar	not have	
return	smd_rect	0-Off, 1-On
give an example	/cgi-bin/hi3510/param.cgi?cmd=getsmdex	

param.cgi?cmd=setsmdex

function	Set the box that hold to human shape	
authority	admin	
grammar	not have	
return	smd_rect	0-Off, 1-On
give an example	/cgi-bin/hi3510/param.cgi?cmd=setsmdex&-smd_rect=1	

param.cgi?cmd=getmdalarm

function	Get status of linked alarm trigger	
authority	admin	
grammar	not have	
return	md_alarm_type	Off: motion detect alarm and human shape alarm will trigger a alarm separately On: linkage trigger
give an example	/cgi-bin/hi3510/param.cgi?cmd=getmdalarm&-aname=type	

param.cgi?cmd=setmdalarm

function	Set the alarm triggering	
authority	admin	
grammar	not have	
return	md_alarm_type	Off: motion detect alarm and human shape alarm will trigger a alarm separately On: linkage trigger
give an example	/cgi-bin/hi3510/param.cgi?cmd=setmdalarm&-aname=type&-switch=on
